

I will try printed ones lets see

Yes, that's the right next test.

Try a printed/scanned document with:

</> Python

Run

```
pipeline_options.do_ocr = True
```

Printed text should generally give much cleaner OCR results than handwriting.

When you get the output, send it here. We'll quickly check:

correct text → mistakes → missing text → layout → whether it's good enough for RAG, and then move to regular OCR without Docling.

ChatGPT can make mistakes. Check important info.
